

# GREENWORLD

P R O J E C T

The Green World Project forms a foundation  
for building a better, greener, and  
environment-friendly planet.

Whitepaper Version: 0.2  
May 25th, 2019

## **Disclaimer of Liability, No Representation, Warranties, or Advice**

**IMPORTANT NOTICE. PLEASE READ THIS SECTION, ALONG WITH THE FOLLOWING SECTIONS ENTITLED “DISCLAIMER OF LIABILITY, NO REPRESENTATION, WARRANTIES OR ADVICE,” VERY CAREFULLY.** If you are in any doubt as to the action you should take, you could consult your legal, financial, tax, or other professional advisor(s).

The GWP tokens are not intended to constitute securities in any jurisdiction. Our Whitepaper does not constitute a prospectus or offer document of any sort and is not intended to constitute an offer of securities or a solicitation for investment in securities in any jurisdiction.

No regulatory authority has examined or approved of any of the information set out in this Whitepaper. No such action has been or will be taken under the laws, regulatory requirements or rules of any jurisdiction. The publication, distribution, or dissemination of this Whitepaper does not imply compliance with applicable laws, rules, or regulatory requirements.

The Green World Project team reserves the right to make changes to any materials, content, and/or data presented in this document and to make changes to any of its sections, delete individual document sections or delete the entire document at any time without prior notification.

Any qualitative and quantitative indicators, including information about the procedure, terms, and timing of the project, as well as any specific information featured in this document about the future actions of the team or its members in the context of the implementation of this project, cannot be considered unconditional and unaltered, and in the future may change, including significant ones, as a result of which this project can be implemented in a different form or stay completely unrealized.

We are not responsible for any losses that may occur, including loss of profits, income, production, business, contracts, commercial opportunities, or reputation. We are not responsible for any of your special, indirect, or incidental losses.

## Introduction

The environmental state of our planet is deteriorating, and there is no Planet “B.” While there are many complex and interrelated issues, we believe the following matters most significantly impact the global and environmental health currently and in the immediate future:

- A global increase in the amount of CO2 emissions and pollutants are impacting health ;
- Lack of essential funding for ‘Green’ and scientific research projects with the goal of improving our global and environmental health ;
- Single-use Fossil resources are being depleted rather than being replaced with less harmful ways to produce energy ;
- Projects which promote environmental improvement without transparent reporting on spending and results create distrust.

As a grass-roots movement, the Green World Project has been initiated to help resolve these problems. GWP will form a digital ecosystem as a foundation for helping to build an environmental and climate-friendly planet. The Green World Project will initially focus on three key areas:

- Building a digital platform for funding verified (research) projects that aim to improve our environment and global health; (short to mid-term)
- Building a green (eco-friendly) energy hardware platform to replace the current use of fossil resources; (short to long-term)
- Developing a blockchain ecosystem and information base capable of storing information regarding ‘green’ projects and their assets; (mid to long-term)
- Why a Cryptocurrency is the best way to do this:
  - To provide anonymity for investors;
  - To transfer funds to projects more quickly and efficiently around the globe, to those who are doing the real work for world improvements;
  - To validate that projects deliver a minimum specific in return for their funding;
  - To provide better visibility for every green project, connecting people around the globe with the projects they would most like to support;

The entire team would like to thank all the crypto enthusiasts, investors, and businesses around the globe who have made it possible to begin this initiative now. It is our hope that the Green World Project will partner with many and help bring about the mass adoption of cryptocurrency and blockchain technology.

## Vision

The Green World Project's ultimate goal is to support the environment in the following ways: to provide renewable energy; to support substitutes for fossil resources; to raise awareness about environmental issues; and to further those goals by helping to fund green and global health improving (research) projects.

Used as a payment method, the Green World Project token enables “green” transactions (low/zero emissions), supporting projects that perform research, and projects that offer “green” products and services.

The Green World Project will be raising awareness of environmental issues through various mediums including, but not limited to websites, mailing campaigns, social platforms, events, podcasts and through our commercial partners. We will also be raising awareness through partnering with, and funding, (research) projects, and advising these projects through to completion, whether it be academic or a market product.

In our vision, our three core components (digital platform, hardware platform and blockchain) create a self-sustaining ecosystem, capable of expanding to any required level and involving any number of verified projects, people and components.

Our token will play a vital role in our ecosystem, becoming a method of funding, a utility and a means of improving our planet by fueling our ecosystem.

A clear road map with achievable targets in combination with solid partnerships in projects, companies, and individuals with “green” goals and a reassuring level of transparency will ensure the success of GWP.

## Token specification

**Ticker:**  
GWP

**Token name:**  
Green World Project

**Total supply:**  
18,400,000,000

Total number of maximum GWP tokens there will ever be

**Token base:** ERC20  
Smart contract on the Ethereum blockchain

**Decimals:** 18

Vitalik Buterin, the creator of Ethereum, specified 18 decimal places with the foresight to cope with the growing usage of blockchain technologies.

There is a movement to format all ERC20 tokens to 18 decimal places

**Circulating supply:**  
6,587,200,000  
Number of GWP tokens initially distributed and available for usage

**Contract address:**  
0x4ffe33e525042cc84c503db5842ecda280f4a805

**Creation date:**  
Apr-13-2019  
04:13:04 PM +UTC

**Blockchain explorer:**  
[https://etherscan.io/token/  
0x4ffe33e525042cc84c503db5842ecda280f4a805](https://etherscan.io/token/0x4ffe33e525042cc84c503db5842ecda280f4a805)  
Check and view all GWP transactions

**Foundation wallet:**  
0x3feae77fdd4b21a9c946c5983eb72fb6f0ad2f51  
All GWP official wallets are managed by the GWP team

## Token distribution info

	%	Allocation GWP	Locked %	Initial GWP	Unlocked	Stored in wallet
Digital Platform allocation	30	5,520,000,000	100	0	Per project	#1
Hardware platform	14	2,576,000,000	0	2,576,000,000	-	-

Wallet #4: 0xC0076b288e6A68AC4f1c8eC3191eFE5f3B517173

All GWP official wallets are managed by the GWP team.

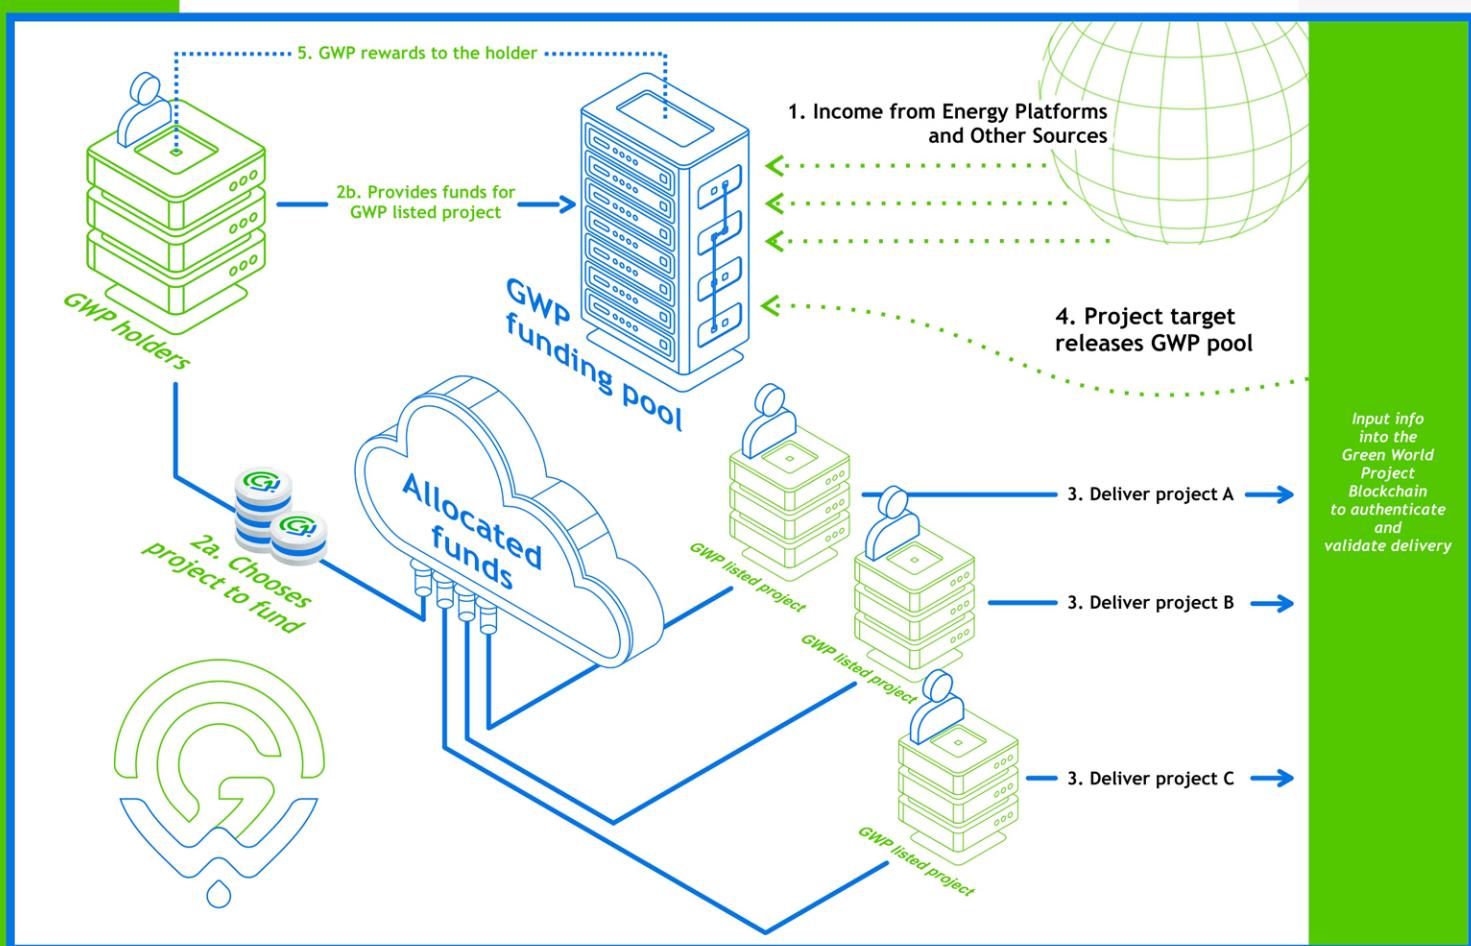

## Ecosystem

### Business Model

The Green World Project's Ecosystem is the foundation on which the idea of a Green future comes to realization. The first part of the GWP Ecosystem is the Digital Platform, on which projects can be listed who seek funding to complete their 'Green' goals. The second part is the GWP Hardware Platform, which consists of any renewable energy (Green) power plant(s), providing Green energy to GWP partners. The third part is the GWP blockchain, a uniquely self-developed blockchain containing data ranging from Hardware metadata to data implemented from the partners of GWP.

Every project that is listed on the Digital Platform is allocated a 'pool' of GWP tokens. When GWP starts raising funds for a project through the Digital Platform, funders are able to send funds to the project's allocated crypto wallet(s). When the fundraising ends, the allocated pool of GWP tokens is unlocked.

The power that is generated through the renewable energy Hardware Platform is sold, and the income is used to (expand the platform and) buy back tokens. These tokens are then used to resupply the GWP pools for new projects on the Digital Platform.

## Digital Platform

The Green World Project's Digital Platform is a web-based platform where projects can apply to list to receive funding. Projects that are listed can be from a range of categories:

- Type 1: 'Green' (eco-friendly) research projects
- Type 2: Scientific (global health) research projects
- Type 3: 'Green' (environmental) development projects
- Type 4: Global health-bettering projects
- Type 5: Any projects aiming to make a positive change in the world, whether this is on the environmental aspect, the global health aspect or the global ecosystem aspect
- Type 6: Any other type of active 'Green' project, determined by the GWP team.

All projects apply to GWP by the use of pre-built application forms. After a project applies to the platform, the application is reviewed by the Green World Project team. Each application will undergo a range of validity, authority and authentication checks.

When the application is approved, the project will be listed on the platform and the team decides the GWP tokens 'pool' size allocated to the project, depending on the scale and goals of the project.

With a project fully listed on the platform and the pool allocated, the project listing is announced and funders can find the project listed on the platform. Funders will be able to fund projects in many cryptocurrencies, starting with the most popular crypto according to market caps. A full list of currencies will be posted when the platform is live.

## Hardware Platform

The Green World Project will be looking at different possibilities where the token can be utilised in the world. There are a range of "hardware projects" (such as Hydro Plants, Solar Plants) that GWP can employ to create a solid foundation and revenue stream to fund the pools on the digital platform.

Hardware projects are physical products which will be used to generate renewable and clean "green" energy. These products will range from small domestic solar panels to large industrial Hydro Plants. Small scale, omnidirectional wind generators could benefit urban based populations, along with technologies which assist people in becoming less reliant upon the costly, yet traditional fossil fuel supplied solutions such as coal and oil.

The Green World Project team is currently conducting a cost-benefit analysis of various hardware products. The initial hardware setup will utilize one of many types of renewable power stations. Contracts will be used between potential clients for power generated by the power station(s). GWP will arrange for generated power to be sold at competitive market rates.

## GWP Blockchain

The Green World Project will feature its very own blockchain providing transparent tracking for GWP partners, who list their (future) deliverables on the GWP blockchain to prove that the funding is spent delivering real benefits as promised.

GWP will review the best options available to provide a secure resource and consult blockchain experts on how best to plan and implement the GWP Blockchain so that it can serve every initiative possible.

Three examples illustrating implementations for the GWP blockchain is as follows:

### Implementation 1. ‘Greenplanet’

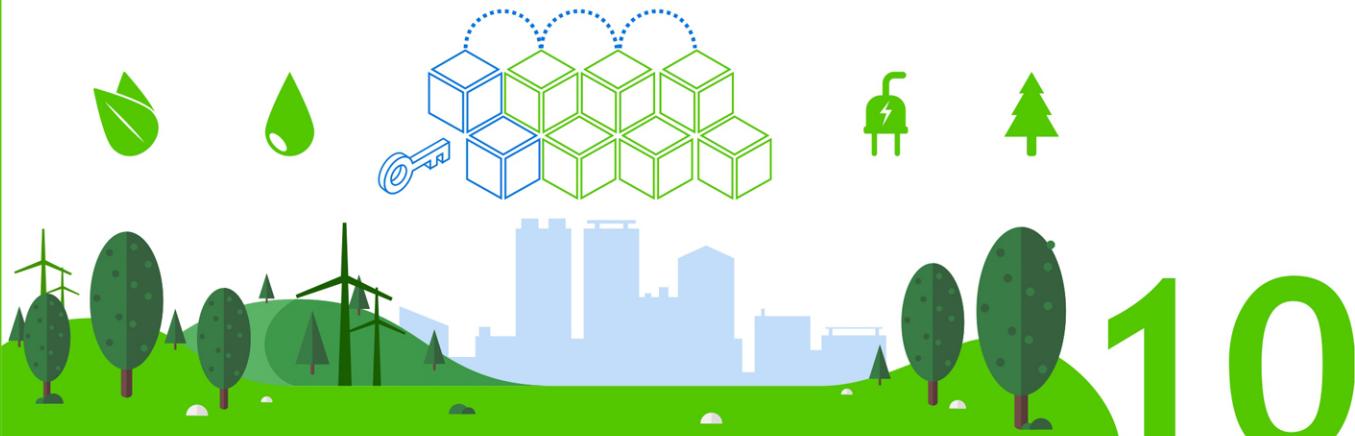

The following is an example implementation. ‘Greenplanet’ is not related to any existing projects.

Green project ‘Greenplanet’ plans to raise funds for replanting trees in forests where trees have been depleted.

First ‘Greenplanet’ raises funds through the GWP Digital Platform through stating its aims, intentions, and time scales. The GWP core team will validate these aims against a set of criteria which provide a level of confidence for the delivery of the project.

With funds raised and remitted, ‘Greenplanet’ begin their efforts planting trees. They list each tree on the GWP blockchain so that the type of tree, the trees location, and the date and time of the trees planting is securely documented and traceable.

By listing the trees on the blockchain, ‘Greenplanet’ proves that they have delivered upon their plans and promise which secures trust for future projects. Complete transparency throughout the process means that anyone around the globe can view the immutable data on the blockchain and know that they are supporting a trustworthy organization, thus increasing their desire to help other projects improve the environment.

## Implementation 2. ‘Green Solar’

The following is an example implementation. ‘Green Solar’ is not related to any existing projects.

Green project ‘Green Solar’ plans to raise funds for building a network of blockchain listed consumer solar panels.

First ‘Green Solar’ raises funds through the GWP Digital Platform through stating its aims, intentions, and time scales. The GWP core team will validate this against a set of criteria which provides a level of confidence for the delivery of the project.

When the funds have been raised and remitted, ‘Green Solar’ begins building solar panels. ‘Green Solar’ list each solar panel on the GWP blockchain to ensure transparency. The income of the produced energy can be calculated from the blockchain and generated power from the listed assets can be made visible and transparent.

Each solar panel has a unique ID. By buying a solar panel and listing it on the GWP blockchain, the owner is granted GWP tokens.

## Implementation 3. ‘Green Certifier’

The following is an example implementation. ‘Green Certifier’ is not related to any existing projects.

Green project ‘Green Certifier’ engages a partnership with GWP.

‘Green Certifier’ provides organic certificates (organic food, organic lumber, etc.) and eco-friendly products (toys, building materials, clothing, etc.) stored on the blockchain.

All the tests and accompanying results verifying a product is authenticity will go through the Blockchain and therefore are immutable; preventing fraud and making the results of those tests accessible to consumers. Thus, consumers can make well-informed decisions when buying organic and eco-friendly products.

‘Green Certifier’ guarantees those products and obtaining those certificates are done most ecologically.

Having the products listed on the blockchain will offer transparency on organic and ecological certificates. These certificates are obligatory in most countries.

## Green Marketplace

The GWP Green Marketplace is a platform where individuals and GWP partners offer services and products in exchange for GWP tokens. Assessed on all payments made through the Green Marketplace is a small fee of 0.1%. This small fee helps to fund future projects.

### GWP Partners

Green World Project's partners will be able to offer their Green products and services on the Green Marketplace. GWP will be looking to partner with any project or organization looking for new ways to promote their products. Products will only be able to be purchased with GWP tokens.

Green World Project is proud to announce the very first partner to offer products on the Green Marketplace: Green Earth Hemp (<https://greenearthhempusa.com/>).

Green Earth Hemp will be offering their complete line of products through the Green Marketplace, enabling the first use case for the GWP token.

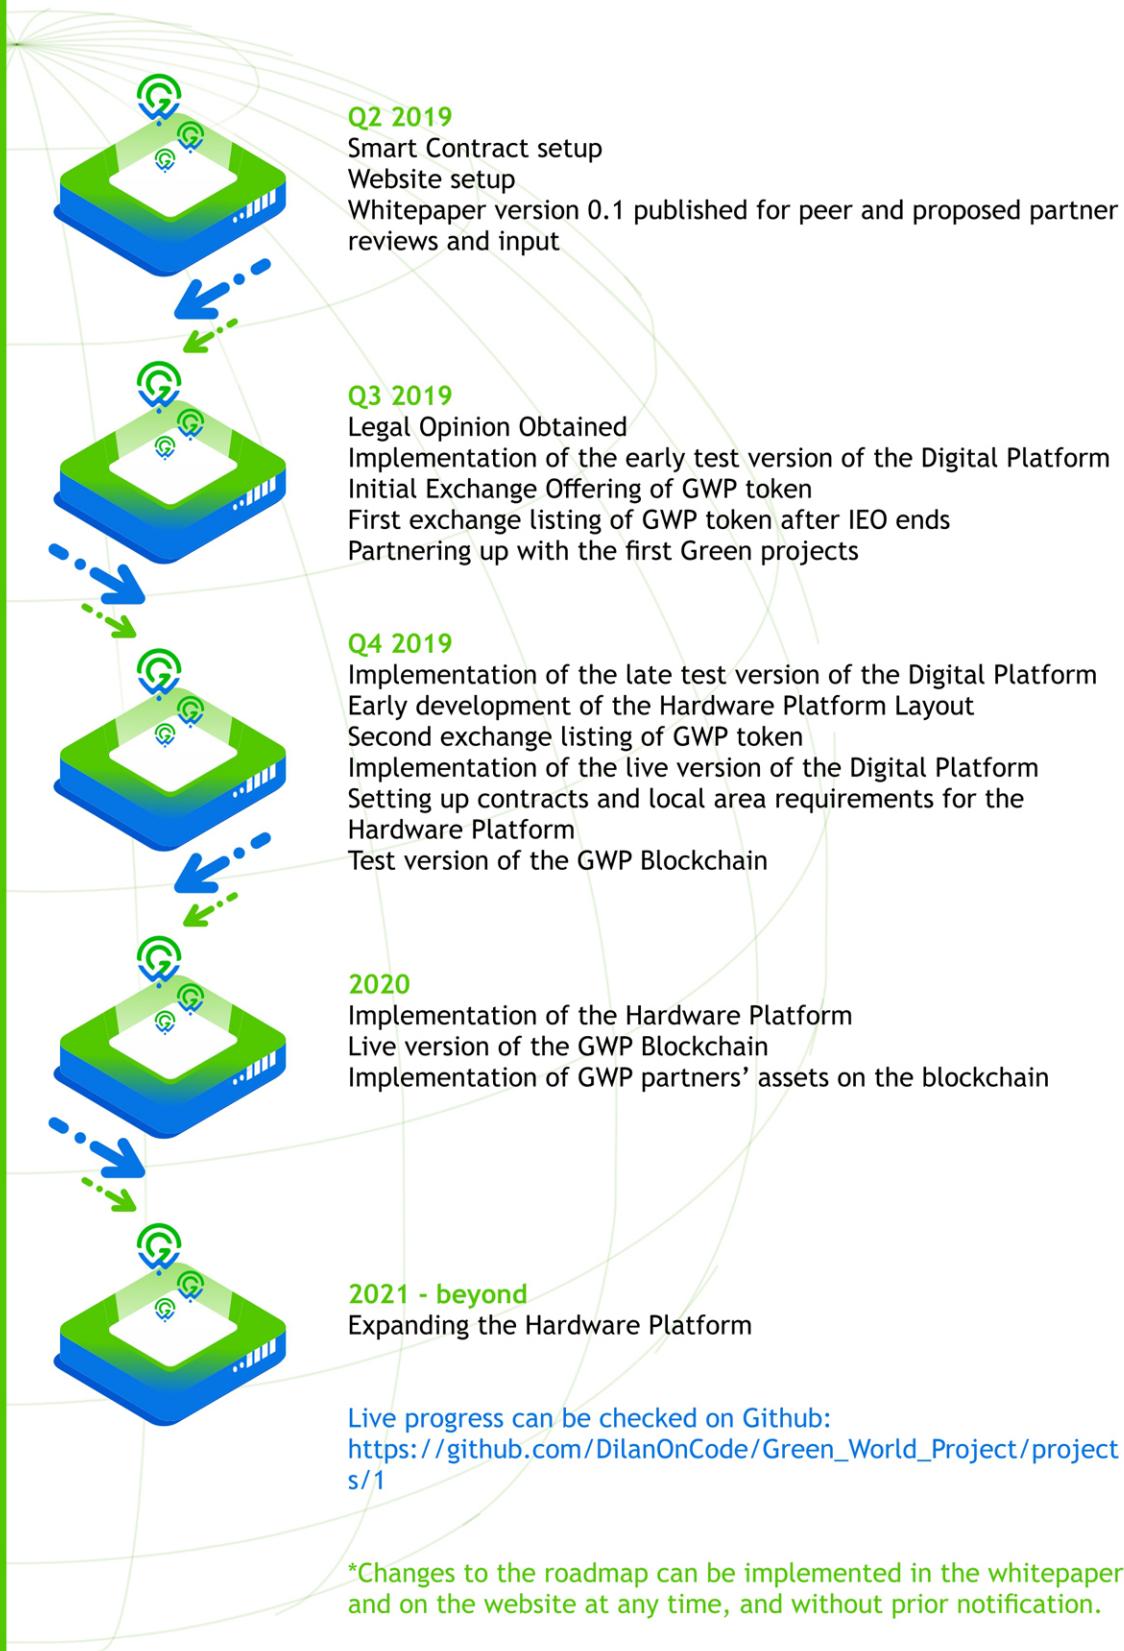

### Individuals

Registered individuals offer their Green goods and services through the Green Marketplace and consumers can purchase those Green goods and services using the GWP token.

## Roadmap\*

## Team

**Dilan Leeuwendaal**  
Director

An IT computer expert, who specialises in Computer Technology. Dilan is a Microsoft Certified Professional who has experience in managing projects, large social media platforms and supporting end users. Development skills include building web-based applications. He has 1.5 years experience working for the Dutch Ministry of Justice and Security, as well as for the Ministry of Finance.

**Thomas Parker**  
Social Manager

A professional plant expert with a Bachelor of Science (Hons) degree in Horticulture. Over 15 years in the industry, award winning Chelsea Flower Show silver medalist, RHS trophy winner, has continued to help push and promote his industry and wants to continue this with a greener approach in the near future.

**Roza Kudzia**  
Events Manager

A passionate environmentalist, a horticulturist and a creative soul. Qualified in Creative Media Production, Sociology and Communications & Culture, I am an innovative, enthusiastic and hardworking individual. I believe in constant improvement and a lot of research. An artist and musician in spare time.

**Chase Speegle**  
Network Manager

A serial entrepreneur with over 15 years of business management experience in various fields, including Telecommunications, Computer & Smart Device repairs and sales. In the past, he partnered with several Prestigious companies including Spectrum (formally known as Time Warner Cable and Charter Communications), Cox Communications, Comcast, Verizon, and Allstate. Most recently, he has taken on a passion for helping others with a holistic and natural approach.

**Jim Nicoll**  
Hardware Advisor

Background in electrical, electronics and automated systems. Has been researching renewable energy and health related fields for more than 10 years.

**Adam Morrow**  
Science Advisor

A biomedical researcher and medical educator. Adam holds a bachelor's degree in Chemistry and a PhD in Basic Medical Sciences (Focus in Cancer Biology). He has 10+ years experience in biomedical research, previously secured funding from the American Heart Association, published research in reputable scientific journals, and works closely with medical and industry professionals.

**Stefan Zaunreither**  
Network Manager

Master in Informationstechnik (IT), PC enthusiast, gamer, building networks and bringing people together. Owns project bitcoin-meister.de with Bitcoin consulting, services and Online shop. Advisor of Eya Coin. Believes Bitcoin and the Blockchain technology will change the world to a better place and with GWP we have the opportunity to make the world greener and smarter.
